NEW CLINTON—HIGHEST YIELDING AND MOST DISEASE RESISTANT OATS

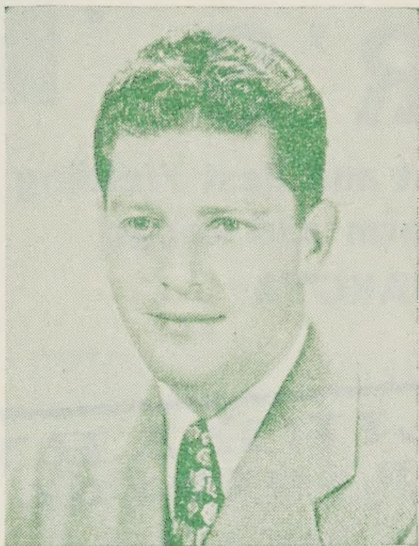

STEERS PASTURING ON BROME AND ALFALFA SHOW BIG GAINS PER ACRE PASTURED

**COSSACK ALFALFA—SECOND CUTTING—HEAVIEST YIELDING—GROWS IN EVERY
STATE IN THE UNION**

BEST YIELDING NEW MARTIN COMBINE MILO 

You Will Make Money In 1948, Too

Our son, Louis, born and raised in Western South Dakota, is now helping manage this business.

Our younger son, Jack, is junior partner, and helps out when out of school.

That's What We Predict for Farmers and for the Whole Nation

Most signs point to: 1. High level of consumer spending. 2. Continued full employment. 3. Heavy industrial investment in plants and in equipment. 4. Big construction activity.

If we lend Europe money via Marshall Plan or other means, we will export a lot of food. This means strong prices for grain and other farm products.

To help you make more money and at the same time help the hungry people of the world, Bober's will supply you the highest yielding, most drought and disease resistant Seed Grain, Flax, Hybrid Seed Corn, Forage, Legume, All Season Pasture and Hay Mixtures and Hardest Alfalfa Seed.

Bober's Hardy Seed, grown on dry land on the higher altitude of the northern foothills of the Black Hills, brings you the added vim and vigor from our Pierre Clay Soils which help you towards higher income farming, Better Living and Prosperity.

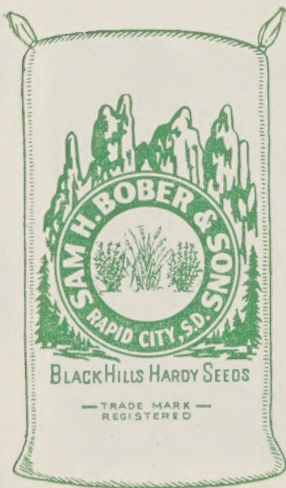

Our best wishes to you and yours in 1948.

Sincerely,

Sam H. Bober & Sons

TERMS OF SALE AND SHIPMENT

Payment: Cash in full with order. Money order, bank draft or check on good bank. We ship promptly on receipt of your order. All items are priced f.o.b Rapid City, except garden seeds, which are prepaid.

OUR NEW HOME

We are now located in Rapid City, S. D., where our enlarged facilities will enable us to serve you more efficiently than ever! Here we can ship over the C. & N. W., Milwaukee or Burlington Railways and on Buckingham, Wilson or R. & B. Truck Lines. We maintain our Newell branch.

PLEASE ORDER ALL FIELD SEED AT ONCE

Help us, yourself, and the railroads, by letting us fill your order in midwinter when transportation is not crowded and when help is easier to get.

YOUR COOPERATION WILL BE APPRECIATED

BUY EARLY AND SAVE MONEY!

Bober's Field Seeds were awarded ten First and two Second Prizes at the 1947 South Dakota State Fair.

Ten Reasons Why You Should Plant PROF. HANSEN'S SIBERIAN COSSACK ALFALFA

1. It is the hardiest alfalfa known; 2. A better soil builder than other alfalfa; 3. More drought resistant; 4. Will make a big crop of hay in a dry season when others fail; 5. Has a double root system, both branched and deep; 6. Makes finer quality hay; 7. Will yield more hay per acre no matter what the weather conditions are; 8. Freezing does not kill young plants, neither does it kill or injure the growing hay; 9. Requires less seed per acre than other varieties; 10. Hogs do not kill it out for pastures, as they do other strains. **COSSACK**, the World's Finest Alfalfa. Means more hay and a longer lasting stand. Purity 99 per cent, 90 per cent or more live seed. Dollar for dollar your best alfalfa buy.

10 lbs. \$5.10; 30 lbs. \$14.85; 60 lbs. \$29.10; 100 lbs. \$48.00

Cossack Alfalfa—Second Cutting—Heaviest Yielding—Grows in Every State in the Union

LADAK ALFALFA IS WILT RESISTANT

Originated in the very high mountainous section of India. It has proved very hardy and drought resistant and it is also wilt resistant. The supply of this seed is very limited. 99.5 per cent purity, 90 per cent or more live seed.

10 lbs. \$5.80; 30 lbs. \$16.65; 60 lbs. \$32.70; 100 lbs. \$54.00

LADAK AND COSSACK ALFALFA MIXED

For sections of country where wilt disease bothers alfalfa we recommend this mixture composed of half Ladak and half Cossack alfalfa for resistance to disease and at the same time high yielding ability of hardy alfalfa. 99 per cent purity, 90 per cent or more live seed.

10 lbs. \$5.45; 30 lbs. \$15.90; 60 lbs. \$31.20; 100 lbs. \$51.50

GRIMM-TYPE ALFALFA SEED

Ninety-nine per cent purity, 90 per cent live seed.

30 lbs. \$14.55; 60 lbs. \$28.50; 100 lbs. \$47.00

MONTANA HARDY AND DAKOTA NO. 12 ALFALFA SEED

Ninety-nine per cent purity, 90 per cent live seed.

60 lbs. \$28.20; 100 lbs. \$46.50

FARM BELT ALFALFA SEED

A mixture of the above varieties, not as bright or as plump seed.

Ninety-eight per cent purity, 85 per cent live seed.

60 lbs. \$25.50; 100 lbs. \$42.00

All our seed is free from noxious seed. The above prices include the cost of the bags and Free Inoculation with the seed if ordered on or before February 1st

IMPROVED ALL SEASON PERMANENT PASTURE AND HAY MIXTURE

All Season Permanent Pasture is well adapted to alternate grazing. One-half is being pastured while the other half is growing up again.

FIRST WE TOLD OUR CUSTOMERS — NOW THEY ARE TELLING US

... how much more palatable, more productive per acre and more profitable they find our year around pasture and hay meadow, the **ALL SEASON PERMANENT PASTURE AND HAY MIXTURE**. We know it is good and we know it is the best value and that is why we recommend it to you without qualification as a real investment. Here are a few facts:

1. Once established, it does not have to be reseeded.
2. It is good insurance against pasture shortage due to seeding failures or winterkilling of certain crops intended for use as pasture.
3. These sod-forming grasses mixed with alfalfa will build soil, prevent erosion, stop bloat, and make the stands last.
4. **ABUNDANT GREEN FORAGE** is produced from early spring to late fall —ideal for dairy cattle.
5. It provides pasture in cold weather when other grasses are dormant.
6. It has two or three times the carrying capacity of ordinary pastures and when cut for hay, it produces two to three times the tonnage of more palatable and nutritious hay per acre than do the ordinary grasses.
7. It can be plowed up anytime or left indefinitely.
8. It resists dry weather and will choke out weeds.
9. It is ready to receive livestock from two to four weeks before other grasses may safely be used. It is the pasture with the High Protein Content.
10. It starts sufficiently early to be ready in most years for use during the calving and lambing. It stimulates the flow of milk from cows and ewes which results in increased vigor and significantly higher weaning weights.

THIS PASTURE PUTS NITROGEN AND FIBER IN THE SOIL; MEAT ON YOUR LIVESTOCK AND MONEY IN YOUR POCKET

Pasture A. For fertile land with sufficient rainfall or on irrigated land. Composed of equal parts: Smooth Bromegrass, Hardy Leafy Alfalfa, Slender Wheatgrass and Domestic Ryegrass. Plant 16 to 20 lbs. per acre.

50 lbs. \$14.50; 100 lbs. \$28.25

Pasture B. For semi-arid region and land of medium fertility. Composed of equal parts: Smooth Bromegrass, Crested Wheatgrass, dwarf Sweet Clover, Domestic Ryegrass and Hardy Leafy Alfalfa. Plant 10 to 14 lbs. per acre.

50 lbs. \$13.80; 100 lbs. \$27.00

STEERS VOTE OUR PASTURE THE BEST

From a Benton County, Iowa, farmer: "Your All Season Pasture and Hay Mixture made more money per acre for me, with less work, than my corn did. It made possible the cheapening of beef cattle by 50 per cent, and I got six times as much feed as ever before on the same piece of ground."

Smooth BROME GRASS Outyields Bluegrass 2 to 1 Most Palatable of All Pasture Grasses

Smooth Brome Grass is a Giant Bluegrass—hardy and permanent and it roots deeply, sometimes 4 and 5 feet deep, making it stand dry and hot weather as well as the coldest winters.

It is the first green grass in the spring and the last in the fall and keeps green all summer when other grasses are dried.

All classes of livestock like it. Very palatable. As it is a grass, it cannot poison stock. It is important to seed it as early as the ground can be worked. Very little if any injury from frost.

Plant 15 to 20 pounds per acre, where it is seeded alone. Do not cover deeply— $\frac{1}{2}$ -inch deep is sufficient. No. 1 seed, free from foul weeds.

Smooth Brome Grass

10 lbs. \$2.90; 25 lbs. \$6.50; 50 lbs. \$11.75; 100 lbs. \$22.50

DOUBLE DUTY PASTURE

"Miracle Twins" BROME and ALFALFA Produce Profits and Save Soil

A Fifty-Fifty Mixture of Quality Seed

For years you've heard about "renovating" bluegrass—snapping it up with lime and legumes. Now experimenters are talking about a better system. It's called "conversion"—changing bluegrass over to more productive brome grass and alfalfa. Both are very drought resistant. They supplement each other in a remarkable way. Pasture test for an average of three years, an acre of Brome-Alfalfa produced 3,933 pounds of milk and had an average of 145 pasture days. Straight Alfalfa produced 3,606 pounds of milk and provided 124 pasture days. In another test the mixture pastured by sheep gained 362 pounds per acre. Straight Alfalfa 209 pounds. Sow about 16 pounds of the mixture per acre.

\$18.50 for 50 lbs.; \$35.50 per 100 lbs., including bags

Herefords on Brome-Alfalfa Pasture

**PASTURE is your cheapest and most
PROFITABLE FEED**

New **RANGER ALFALFA**

After years of patient research, plant breeders of the U. S. Department of Agriculture have developed a new winter hardy Bacterial Wilt Resistant **RANGER ALFALFA**, which will maintain good stands in wilt infested areas, for many years after Grimm and Common alfalfa have been killed by the disease. It will also yield 24 per cent to 30 per cent more hay per acre in such areas.

RANGER ALFALFA is the result of crossing and recrossing of Cossack, Ladak, Dakota No. 12, Hardistan and Russian Turkestan alfalfa. It will not yield more and will not do better than Cossack and Ladak alfalfa where bacterial wilt is not too much of a problem.

We have a limited amount of Ranger Alfalfa seed which will be distributed to alfalfa seed growers. For some of our customers who wish to plant a small trial plot we offer 1 lb. of Ranger alfalfa for \$1.40; 5 lbs. for \$6.50 prepaid.

GROW QUICK PASTURE MIXTURE 3.75 **25 Lbs.**

For Cattle, Sheep and Hogs

The cost of seeding is low and it gives quick production of Palatable Pasture within relatively few weeks after sowing.

Contains equal parts of Sweet Clover, Domestic Ryegrass, Timothy, and Spartan Barley.

The Ryegrass and Barley in this combination are fast growers and afford the earliest feed. Meanwhile the Sweet Clover and Timothy are developing to increase its production and value. It keeps on growing until after frost. The Sweet Clover, Timothy and most of the Ryegrass of course live over winter and can be used the next year for plowing under, for continued pasture or cut for hay.

Sow 20 pounds per acre. Sow about the time you sow small grain. Do not use a nurse crop.

50 lbs. \$6.75; 100 lbs. \$12.50, including bags

Lambs on Grow Quick pasture

Hubam Annual Sweet Clover. When planted at the rate of 12 to 15 lbs. per acre, in early spring, produces quick pasture which lasts until fall. Plow under in the fall to increase next year's grain or corn crop.

\$13.50 per bushel; \$22.00 per 100 lbs.

**PASTURE is your cheapest and most
PROFITABLE FEED**

CRESTED WHEATGRASS—The Miracle Grass

Builds BEEF and MUTTON

A drought resistant, long lived perennial bunch grass, introduced by Professor Hansen of South Dakota State College, who found it in Siberia from where he also introduced Cossack Alfalfa. It is as perfect a balanced diet as can be found in one plant. Sometimes called the Miracle Grass because of its:

RESISTANCE TO SEVERE CLIMATIC CONDITIONS: Introduced from the plains of Siberia, it has stood the most severe droughts of the western plains and has withstood temperatures ranging from 50 degrees below zero to 120 degrees above during hot and dry summer months.

LONG GROWING SEASON: Becomes green two weeks earlier in the spring than other grasses and stays green later in the fall. Has grown four inches in November and December before below zero temperatures put it in a temporary dormant stage.

HEAVY PRODUCTIVITY: The Wyoming Experiment Station reports that its hay produces seven times as much meat per acre as is produced by native grass hay. Produces twice as much pasture and hay of high palatability as native grass. Tests as high as 35 per cent protein AND shows absolutely no effect from heavy grazing.

RECLAIMING VALUE: Because of its heavy root system and resistance to severe climate, it has reclaimed millions of acres of land apparently ruined by erosion. It reseeds itself and chokes out weeds, conserves moisture and at the same time provides a wonderful forage for livestock.

10 lbs. \$4.40; 25 lbs. \$10.25; 50 lbs. \$19.75; 100 lbs. \$38.50

Photo by the Black Hills Studio

Wheatgrass is not only the most profitable for beef cattle but is also the best year round permanent pasture for production of wool and mutton on dry upland in west and southwest states

DRY LAND PERMANENT PASTURE MIXTURE

High altitude seed produced from the hardiest known strains, grown without irrigation. Well adapted to the intermountain region as well as lower country of the Western and Southwestern states. Composed of equal parts Crested Wheatgrass, Smooth Brome Grass, Domestic Ryegrass and Dwarf Yellow Sweet Clover.

25 lbs. \$6.80; 50 lbs. \$12.50; 100 lbs. \$24.50

SWEET CLOVER is the CHAMPION Soil Builder

HUBAM ANNUAL SWEET CLOVER increases yields. For quick grazing and soil improvement plant 12 pounds of Hubam Clover per acre with your oats, wheat or barley. It is very desirable for bees, too. You can plow it under in early fall or harvest a good seed crop.

\$13.50 per bushel; \$22.00 per 100 lbs.

BEST NORTHERN WHITE SWEET CLOVER SEED

10 lbs. \$2.50; 30 lbs. \$6.60; 60 lbs. \$12.60; 100 lbs. \$20.50

BEST NORTHERN YELLOW DWARF SWEET CLOVER

DWARF ESSEX RAPE SEED FOR SHEEP AND PIG PASTURE

5 lbs. \$1.50; 10 lbs. \$2.60; 25 lbs. \$6.00; 50 lbs. \$11.25

NORTHERN GROWN TIMOTHY SEED

25 lbs. \$3.00; 50 lbs. \$5.65; 100 lbs. \$10.50

DOMESTIC RYEGRASS FOR EARLY PASTURE

10 lbs. \$1.80; 25 lbs. \$4.25; 50 lbs. \$8.00; 100 lbs. \$15.50

TO IMPROVE YOUR PASTURE AND SOIL

PLANT LADINO CLOVER

A leafy succulent perennial, a giant form of White Clover, has a tendency to remain close to the ground. It is a very useful legume addition to your present pasture on some of the soils which are not suitable for alfalfa. A pound of seed per acre in mixture with your other grasses will be a very good investment on your farm. A complete recovery after grazing takes place in two weeks. An able competitor with most grasses.

\$2.90 per lb.; 5 lbs. for \$13.60; 10 lbs. for \$26.50 prepaid

FOR ALKALI SOILS

STRAWBERRY CLOVER—Thrives on alkali soils. A perennial low-growing plant makes an excellent pasture on alkali land that does not tolerate other plants. Used successfully in irrigation districts to make useless land profitable. Plant 2 pounds per acre. You will be well pleased with results.

\$2.15 pound; 5 lbs. prepaid for \$10.00; 10 lbs. \$19.00, postpaid

New MONTANA PERENNIAL CLOVER Thrives on Alkali Soils

This plant which looks like a cross between sweet clover and alfalfa was discovered growing in low moist alkali soil in Montana, is cut, cured and stacked like alfalfa. There are many farms in the west with alkali spots on which this clover is recommended for planting. Plant 5 to 7 pounds per acre late in February or in March. Shallow planting on firm ground is best.

1 lb. \$1.10; 5 lbs. \$5.00, prepaid. Not prepaid, 10 lbs. \$9.00; 25 lbs. \$22.00.

BIRD'S-FOOT TREFOIL for Moderately Alkaline Lands

A new perennial legume adapted for irrigated or sub-irrigated land or in sections of country where rainfall or irrigation is not sufficient enough to grow good Ladino Clover. Successfully used on Iowa upland and poorer soils.

5 lbs. \$8.25; 10 lbs. \$16.00; 50 lbs. \$75.00

Bird's-Foot Trefoil withstands drought and excess water better than other legumes. The plant grows about as high as alfalfa, has small leaves, and is recommended for both hay and pastures.

Sam Bober Pioneered Brome-Alfalfa

50-50 Mixture of Quality Seed

Sam H. Bober, who was among the first to recognize the higher value of Legume-Grass mixtures and pioneered the Brome-Alfalfa fattening pastures. We operate a 10,000 acre ranch in Butte county, on the northern foothills of the Black Hills, for livestock grazing and for trying out new introductions in field crops.

Labor-short farmers who grew up on dry-lot feeding now speak enthusiastically about **FATTENING PASTURES** composed of Smooth Brome Grass and Hardy Dryland Alfalfa (50-50 mixture) **that can** put cattle, hogs and sheep on the market, with less grain, less protein and a whale of a lot less work. These farmers speak, too, of fattening pastures growing from our grass-legume mixtures **that add 10, 15, 20 or more bushels to the acre** when the land is put back to corn or grain after two or more years in meadow.

Sam H. Bober pioneered these grass-legume pastures just 30 years ago when he was in charge of pasture and livestock experimental work for the U. S. Experiment Station. Now over a dozen leading State Experiment Stations recommend it.

**\$18.50 for 50 lbs.; \$35.50 per 100 lbs.
including bags**

BROME-ALFALFA-LADINO MIXTURE

We recommend a mixture of 8 lbs. Brome, 7 lbs. Cossack Alfalfa and 1 lb. Ladino Clover per acre on good fertile land for greatest returns. Your Experiment Station recommends it, too.

30 lbs., \$14.80; 60 lbs., \$29.00; 100 lbs., \$48.75

SAVE MONEY ON MINERALS

The LADINO CLOVER plant contains 25% protein, is high in fat and is a fine source of minerals because of its high ash content. On fertile soils we advise adding 1 pound of LADINO CLOVER seed per acre to whatever pasture you are now using.

Ladino Clover is a super-giant cousin of the little white clover. It restores nitrogen to the soil many times more rapidly than its miniature cousin. Wisconsin, Indiana, Illinois and Ohio stations recommend it. In Iowa it topped nine tests compared with other clovers.

Besides being such a good addition to pastures for Cattle, Sheep and Hogs, LADINO CLOVER is now coming in prominently as most practical pasture for poultry.

1 lb. \$2.90; 5 lbs. \$13.60; 10 lbs. \$26.50

ORDER EARLY AND AVOID DELAYS AND DISAPPOINTMENTS

South Dakota Agri. Experiment Station Photo

RANCHER SORGHUM

The newest introduction in sorghums released by the South Dakota Experiment Station, will save stockmen thousands of dollars by preventing losses from acid poisoning and give us a dependable safe forage. RANCHER Sorghum is a hybrid developed by crossing and recrossing Low Acid selections from Dakota Black Amber.

It has a sweet leafy stalk plant with the lowest hydrocyanic acid content of any named forage sorghum variety in production; it contains only one-third the acid of the Low Acid Cane and only one-tenth of the dangerous acid content of commercial varieties of cane. It looks to us as if this will make Rancher Sorghum as safe to pasture as Bluegrass.

It has produced six and one-half tons of forage and 2,260 pounds of grain per acre, 25 per cent more than the Amber Cane alongside it.

10 lbs. \$1.85, 25 lbs. \$4.10, 50 lbs. \$7.60, 100 lbs. \$14.50

LOW-ACID CANE

A South Dakota State College introduction which yields more than ordinary cane and has only one-fourth the acid of other commercial varieties. Experiment Stations show that this sorghum produces more forage and feed units per acre regardless of moisture supply. Used for silage in mixture with corn or by itself by many farmers east and west.

10 lbs. \$1.30; 50 lbs. \$5.50; 100 lbs. \$10.00

OATS with an OVERCOAT

for Western and Southwest farms

Brunker Oats No. 2054 are frost resistant. They can be planted in late February or early in March and are not materially injured by spring freezing. When other varieties of oats were killed by late April heavy freeze last year, Brunker oats came through uninjured and made record yields of grain per acre. They are also smut and rust resistant. Order without delay. You will get real value for your money. Earliness Cheats Hazards of July.

10 bu. for \$22.50; 20 bu. or more at \$2.20 bu.

NEW SWEET SUDAN

Free choice of milk cows on Lubbock Experiment Station pasture, shows Sweet Sudan pastured off to the ground before the common Sudan planted alongside the Sweet is touched.

THE IMPROVED SUMMER PASTURE

Sweet Sudan Grass has the grassy character of Common Sudan plus juicy sweetness that livestock wants. Sweet Sudan grows taller than Common Sudan, has more and wider leaves, non-shattering seed head, and is resistant to drought and disease.

25 lbs. \$5.20; 50 lbs. \$9.60; 100 lbs. \$18.50

COMMON SUDAN GRASS

The perfect summer pasture and annual hay plant, whether you live in Eastern States, North, South or in the West. Grows rapidly and thrives in the hot dry months when other pastures are least productive. This is more resistant to grasshoppers than the Sweet Sudan.

Sudan grass is planted at 4 to 20 pounds per acre depending on rainfall.

Standard SUDAN GRASS seed, No. 1 grade.

25 lbs. \$3.75; 50 lbs. \$7.25; 100 lbs. \$13.75

SAVE LABOR — LET HOGS, SHEEP AND CATTLE HARVEST THE CROP

Whether you live East, West, North or South, try this on Sam's recommendation. Plant **GEHU 70-day Flint**, or **Falconer Semi-dent 75-day corn**. High yielding ability and highest fattening quality, best adapted for hogging and sheeping off. Save work and make a higher profit on your livestock. The **earliest maturing corn in the United States**, with real high fattening value. Puts your finished livestock on an earlier market.

Gehu Flint, \$7.25 per bu.; Falconer, \$6.75 per bu.

BOBER'S SEED CORN

For BIGGER YIELDS on Western Lands

Gehu Flint—70-day corn—unexcelled for hogging and sheeping off, drought, frost and hail resistant. Its feeding qualities the highest of any corn.

\$7.25 per bu.

Falconer—75-day yellow semident—the best yielding of early maturing, open pollinated corn. Also used for hogging and sheeping off.

\$6.75 per bu.

Payne's White Dent—80-day corn—record yield of 91 bushels per acre, a consistent good yielder. Also used for hogging off.

Early Minnesota No. 13 Yellow Dent.

Squaw Flour Corn—80-85-day maturity.

Early Northwest Dent (red and white cap)—Leafy, 85-90-day corn.

Rainbow Flint—Highest yield for silage corn, for open pollinated corn.

Price for above 5 varieties of seed corn including bags:

1/2 bu. \$3.25; 1 bu. \$6.00; 5 bu. \$29.50

SO YOU DON'T BELIEVE IN MAGIC? TRY THE New K. F.! THE EARLIEST MATURING HYBRID

Recommended for the 80-day areas of the Dakotas, Montana, Wyoming, Michigan, Minnesota, New York, Utah, etc.

This new Kingscrost KF Hybrid represents 15 years of research to develop a superior corn to replace Falconer and flint varieties. Its rapid spring growth at low temperature, adaptation to short seasons and leafiness are from the flint parent. Non-suckering, tall plants, high ears, and stalk strength to insure fall standability, are contributed by the dent parents. Easy to pick by hand and ideal for mechanical picking plus **INCREASED YIELD** makes this the greatest achievement in several years.

1/2 bu. \$6.75; 1 bu. \$12.50; 5 bu. \$62.00

HYBRID CORN THAT YIELDS MORE AND IS SMUT RESISTANT

Extra Early Straight Yellow Dent Hybrids for 80-day and 85-day maturity.

Now we can furnish you **FROST Resistant, DROUGHT, Heat and Wind Resistant** corn that proved to be record breaking producers of **MORE BUSHELS** of deep kernel, small cob corn per acre in the 80-day and 85-day maturity. Specify KE3 for the 80-day and KE2 for 85-day corn. Regular Flat Kernels.

1/2 bu. \$6.75; 1 bu. \$12.50; 5 bu. \$62.00

90-day Beautiful Yellow Dent Hybrid with tremendous eye appeal in the field, wagon box and crib. Large plants, high ears and a stalk that stands up, winner of the Silver Trophy for highest yield per acre. Just cob enough to hold the kernels together. Survives cold springs and ripens before earliest frosts. What better recommendation?

1/2 bu. \$6.75; 1 bu. \$12.50; 5 bu. \$62.00

DON'T GET CAUGHT SHORT

ORDER ALL SEED EARLY THIS YEAR

Hybrid Corn

**AMERICA'S HIGHEST YIELDING HYBRIDS OF EARLIEST
MATURITY GIVE YOU EXTRA VIGOR AND MOST
DROUGHT, PEST AND DISEASE RESISTANCE**

HYBRID CORN FOR 100 TO 110 DAY MATURITY AND RECORD YIELDER OF GOOD SILAGE CORN

For fertile land with good rainfall we recommend this Hybrid to produce bumper crops. It has large leafy plants, dependable earliness and deep kerneled soft starch ears. It is a little later maturing than our earliest maturing. Wonderful for silage, showing large per cent of grain in proportion to roughage. Fine for dairy cattle and fattening stock. **Regular Flat Kernels.**

1/2 bu. \$5.75; 1 bu. \$10.50; 5 bu. \$51.50

WHEATLAND BLEND—Hybrid Seed Corn

Northern Grown for Northern Farmers

A practical blend of 80-day flint and 85 and 90-day yellow dents in the round, or as some refer to it, thick flat kernels. There is an advantage in having a variance of maturities where unfavorable weather conditions might hit the corn at a critical period of its growth. A planter plate recommendation tag will be sewed in each bag of Wheatland Hybrid seed corn.

Price \$8.50 per bu.; 5 bu. for \$41.50

NEW MARTIN'S COMBINE MILO

Yields 40 to 100 bu. per acre

1. They have a mass of fine roots which draw more of the available moisture from the soil.
2. Their comparatively small leaf area reduces the loss of moisture.
3. They have an evaporation-resistant waxy coating on leaves and sheaths.
4. They have the ability to suspend growth during periods of severe drought and then resume growth when conditions improve.

For Western and Southwestern states we advise—Plant the Limit of this Combine Milo for grain which the United States and the World needs. Only 6 to 8 pounds per acre.

10 lbs. \$1.15; 25 lbs. \$2.35; 50 lbs. \$4.00; 100 lbs. \$7.25; 500 lbs. \$35.00

NEW CLINTON Disease Resistant Spring Oats Made a Record of 145 Bu. Per Acre in 1946

Bred from a Cross of Iowa D69 and Bond Oats

STRAW HEIGHT, STRENGTH AND RESISTANCE TO LODGING

Average Height of Clinton Oats, 33.5 inches

It has unusual resistance to lodging before ripening, and ability to stand without the breaking of straw for a period after ripening. It is better adapted to direct combining than the older varieties. Normally Clinton may be expected to stand well for a period of 7 to 10 days after the grain is first dry enough for safe storage.

PERFORMANCE TESTS—It greatly exceeds other varieties in yielding ability.

ADAPTATION—The widely spread trials of Clinton Oats in Iowa, Illinois, Indiana, Nebraska and Dakota, indicate a wide adaptation of this variety.

RESISTANCE TO RUSTS—Clinton Oats is highly resistant to most of the races of leaf (crown) rust and stem rust occurring commonly in the United States.

RESISTANCE TO SMUTS—Clinton Oats is highly resistant to both loose and covered smut of oats.

RESISTANCE TO LEAF BLIGHTS—Clinton Oats is highly resistant to the leaf blights.

3 bu. for \$9.75; 6 bu., \$19.35; 12 bu., \$38.25; 24 bu. or more at \$3.15 per bu.

LADAK AND COSSACK ALFALFA MIXED

For sections of country where wilt disease bothers alfalfa we recommend this mixture composed of half Ladak and half Cossack alfalfa for resistance to disease and at the same time high yielding ability of hardy alfalfa. 99 per cent purity, 90 per cent or more live seed.

30 lbs. \$15.90; 60 lbs. \$31.20; 100 lbs. \$51.50

ORDER SEED GRAIN AT ONCE, to allow plenty of time for shipment by freight or truck and for early planting. Also order 1 pound of Improved **CERESAN** for every 32 bushels of seed grain to be planted on your farm.

FEEBAR HIGH-PROTEIN BARLEY

INTRODUCED FOR FIRST TIME BY S. D. STATE EXPERIMENT STATION

(1) Earlier Maturity; (2) Higher Yield on Dry Land; (3) Semi-smooth Beards; (4) Stands up good for Combine Threshing and (5) Higher Protein which makes a more profitable barley to feed. If you want this new profitable introduction, act fast and order NOW.

Price, \$4.35 per bushel including bags

SPARTAN BARLEY

Earliest maturing, smooth bearded, two row, highest yielding on dry upland.

\$2.65 per bu., including bags

VELVON

A New Smooth-Awned Barley

That **outyielded** all other kinds alongside of it in variety test. This new variety resulted as a HYBRID strain from a cross made by Dept. of Agriculture plant breeders, for the purpose of improving straw strength and smoothness of beard as well as higher yielding ability. If you have good land and want a real HIGH YIELD, order your seed NOW.

\$3.15 per bu., including bags

KINDRED or 'L' BARLEY

A New Rough-Awned Six-Row Variety

(1) Early Maturing; (2) Heavy Yielding; (3) Stem-rust Resistant, and (4) GOOD MALTING QUALITY.

Our customers were very well pleased with 1947 returns per acre.

\$3.35 per bu., including bags

Everything you want in MALTING BARLEY

New **MONTCAIM BARLEY**, introduced by Canadian Department of Agriculture, 1. Yielded 10 bu. more per acre than other malting barley varieties; 2. Proved to be the BEST Malting Barley by test; 3. Stronger straw strength; 4. Most disease resistant; easiest to combine. As long as people drink beer this barley will make money for you.

Certified Montcaim Barley, \$9.00 per bu., including bags

Made a Record of 64 Bu. Mida Wheat Per Acre

NEW AND BETTER MIDA SPRING WHEAT

In 26 tests it has OUTYIELDED all other well known varieties. **STRONG IN STRAW—EARLY HEADING—Does NOT Shatter—Highest in Test Weight—Resistant to Rust and Stinking Smut—Resists Hessian fly damage. Excellent Milling quality—High in Protein—Low in Ash.** It is the answer to the spring wheat grower's dream.

5 bu. for \$17.00; 10 bu. or more at \$3.35, including extra heavy seamless cotton bags

PROF. HANSEN'S PROSO GRAIN AND HAY MILLET

We'd like to see you try Prof. Hansen's Proso Grain Millet in your ration. This high protein feed is necessary for heavy production. It will keep your chickens healthy and will produce many more eggs. The Latin name (*Panicum Mitiaceum*) indicates that it will yield a thousand fold.

A field of Proso that yielded 75 bushels of grain per acre

A Grain Crop in Sixty Days

This Russian introduction yields fifty to eighty bushels per acre. It takes only sixty or seventy days to mature a grain crop. This is one of the most versatile crops in the country and can be grown everywhere, on dry land and on irrigated land, low land or upland. It can be cut for hay or matured for grain which makes a wonderful chicken feed and can also profitably be used for fattening turkeys and livestock. We counted 1,500 kernels on one plant of Proso.

On dry land plant twenty pounds per acre, any time from May 1st to August 1st. In sections with better rainfall plant it at the rate of 30 pounds per acre with a grain drill. Harvest the same as you do grain.

Look for Two Eggs from Every Pound of Feed.

10 lbs. \$1.15; 25 lbs. \$2.25; 50 lbs. \$4.00; 100 lbs. \$7.50; 500 lbs. \$37.00

Mighty High in Goodness—Mighty Low in Price

Improved TEPARY BEAN

A small white edible bean that yields 50 per cent more beans per acre than other types. Can also be used for a quick high protein hay crop and soil builder. Plant it first week in June and in 60 days you have large tonnage high protein hay and pasture; or a whopper of a crop in beans.

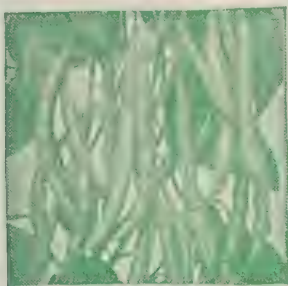

It has greater **HEAT** and **DROUGHT RESISTANCE** than other beans, producing good crops in seasons when other beans failed completely, and has outyielded the best varieties of soybeans by a considerable margin.

10 lbs. \$2.25; 25 lbs. \$5.10; 50 lbs. \$9.50; 100 lbs. \$18.00

BOBER'S NORTHERN VEGETABLE SEEDS

Imp. Golden Bantam

A REAL CASH CROP

Here is a harvest picture of Sweet Spanish Onions taken by the Black Hills Studio, in Spearfish Valley, of a field that made 1,600 bushel baskets per acre. Who can top this? We have similar reports from customers in Michigan, Nevada and Colorado. Mr. James Muroya of Kersey, Colorado, who specializes with our Utah strain Sweet Spanish Onions came near making same record of production.

The Utah Strain of SWEET SPANISH Onion seed produces the best onions for home use and the most profitable crops for market.

EVERMORE STRAWBERRY PLANTS

WESTERN WHEAT GRASS

**A Billion Dollar Blessing on the Stock Farms of the Great Plains States
from Canada to Mexico**

The most drought resistant, year-around permanent pasture and hay plant in existence. Produces the most nutritious hay and the finest pasture for cattle, sheep and horses. Unaffected like other grasses that die down in the fall with the first frost, this wonderful grass is not affected and furnishes pasture winter months as well as in the spring and summer. Once started it lasts a lifetime. Stands 120 degrees Fahrenheit in the summer and 40 below zero freezing in the winter without apparent injury. Prefers clay soils. Plant 12 pounds per acre by broadcasting the seed on firm ground in winter months or early spring.

Prices: 10 lbs., \$3.50; 25 lbs., \$7.75; 50 lbs., \$14.75; 100 lbs., \$28.50.

Sam H. Bober inspecting a field of Western Wheat Grass ready to cut for seed.

SIX DOLLAR FLAX for '48

4,300,000 Acres Needed Again!

No matter what happens to other farm prices next year, Flax is a sure thing! The government has extended its "floor price" of \$6.00 per bushel to apply to the 1948 Flax crop. This guarantee assures farmers not less than \$6.00 per bushel for No. 1 Flax delivered Minneapolis.

We can supply you either the **Bison Large Seeded Flax Seed** or the **Redwing Smaller Seeded Flax Seed**, free from mustard and any other noxious weeds at \$9.00 per bushel including bags. Order without delay and be sure of good northern rust resistant seed of high yielding ability. Early planted flax seed yielded 20 to 24 bushels per acre. It makes a wonderful nurse crop for alfalfa seed.

BOBER'S 30-DAY RICHGREEN LAWN GRASS

For a Beautiful Lawn
All Season

Order Bober's "30-Day Lawn Grass" early and sow it as soon as the snow melts away in early spring. Sow one pound to 250 square feet and you will have a well established lawn by early summer. This mixture consists of fine leaved and deep rooted perennial grass and some White Dutch Clover, which assures a beautiful rich green lawn thick and free from weeds.

Unsurpassed for open sunny spaces. Adapted to areas of moderate shade.

1 lb. 80c; 3 lbs. \$2.25; 5 lbs. \$3.60; 10 lbs. \$7.00 postpaid.

Richgreen Lawn Grass

WHITE DUTCH LAWN CLOVER Seed.

BUFFALO GRASS

Makes Wonderful Lawns in Dry Climate Regions

In the lighter sandier soils, and the dry and semi-dry regions Buffalo Grass has proven highly desirable for lawn use. It is a low growing plant, seldom getting over 6 inches in height; hence needs no cutting and requires very little care. Our seed is treated and scarified to make it grow quicker. Since it is spread from underground root stocks, as well as from seed, once you get a thin stand established, it thickens up all by itself.

1/4 lb. 65c; 1/2 lb. \$1.20

One pound covers 3,000 square feet. \$2.00, Postpaid

FAIRWAY STRAIN OF CANADIAN CRESTED WHEATGRASS

A very hardy, leafy grass easy to start if planted real early in the spring because it germinates better in cool, moist weather. Plant at the rate of one pound to 300 square feet. Very good for dry regions.

1 lb. 60c; 5 lbs. \$2.85 postpaid

LEGUME AID INOCULATION FOR ALFALFA AND CLOVER SEED for better stands, better yields and better feeding value.
